2. Since no selection is made yet, currently the "profile" of the whole country is shown, with a population of 16 million.

3. The profile components, in this case the computed risk score and its sub-scores, are the average of the entire selection, thus the entire country.

5. Note that at this higher administrative level, a lot more data is available. Click on the various risk-components to find out which.

1. You start with a view of Malawi divided into it's 32 districts ..

4. The color-coding immediately tells you which districts have a high/low risk-score.

0. This tutorial is specifically about guiding you through the ECHO2-results. For a more general tutorial on this dashboard click here.
